JP VODOVOD KANALIZACIJA SNAGA d.o.o., Vodovodna cesta 90, 1000 Ljubljana

WWTP Ljubljana, Cesta v prod 100, 1000 Ljubljana

SRF Class and origin

Class code: **NCV 4; Cl 1; Hg 3**

Origin: **19 08 05**

SRF Origin and preparation

Ljubljana Central Wastewater Treatment Plant (WWTP Ljubljana) is designed for 360,000 PU. Depending on the cleaning technology used, it is a single-stage mechanical-biological treatment plant with a secondary treatment stage. It can treat up to 38 million m³ of wastewater annually. The cleaning effect with respect to COD is about 90% and with respect to BOD₅ about 96%. Excess sludge is generated at the treatment plant in the process of biological treatment of municipal wastewater (19 08 05). This sludge is led to gravitational and mechanical pre-thickening and then to a decay site where anaerobic mesophilic stabilization is performed. Due to the implementation of the obligatory public utility service, septic sludge (20 03 04) and sludge from small municipal sewage treatment plants (19 08 05) and excess sludge from other municipal sewage treatment plants (19 08 05), which are managed by PC, are also accepted at the plant. PC Vodovod Kanalizacija Snaga d.o.o. The stabilized digested sludge is then dehydrated and dried/ pelletize. The final product is hygienic pellets with a dry matter content of at least 90%.

Waste from company PC Vodovod Kanalizacija Snaga, d.o.o. meets the requirements of the Regulation (AVV), BGBl. II 2002/389 idF BGBl. II 2010/476, Annex 8.

Legend:

d = dry basis

ar = as received

* = The heavy metals in the sum are Sb, As, Cr, Co, Cu, Pb, Mn, Ni and V and equals those in the Waste Incineration Directive (WID)
